around perimeter of buildings	Kills ants	6-45	4

**To kill ants:** Apply at 6-45 kg/ha (0.6-4.5 g/m<sup>2</sup>). Scatter the bait on the soil around or near the plants to be protected. Bait can be placed in a ring around the base of individual plants or trees. For homes and other structures scatter the bait as a perimeter treatment that is 1 m or less out from the building's foundation of the structure to be protected. In greenhouses or in outdoor containers scatter the bait on the soil in the containers of plants being damaged or around the containers. On lawns, broadcast bait over area where ants occur. Apply at the higher rate if the infestation is severe. Reapply after heavy rain or watering. Reapply as the bait is consumed or every 4 weeks.

**To suppress spotted wing drosophila:** Apply at 35-45 kg/ha (3.5-4.5 g/m<sup>2</sup>). Scatter the bait on the soil around or near the plants to be protected. Bait can be placed in a ring around the base of individual plants. Apply at the higher rate when spotted wing drosophila pressure is high. Reapply after heavy rain or watering. Reapply as the bait is consumed or every 4 weeks.

**To control black cutworm:** Apply at 25-50 kg/ha (2.5-5.0 g/m<sup>2</sup>). Scatter the bait on the soil around seedlings or in containers of outdoor ornamental seedlings. On lawns, broadcast bait over area where black cutworms occur. Apply at the higher rate when black cutworm pressure is expected to be high. Reapply after heavy rain or watering. Reapply as the bait it is consumed or every 4 weeks.

**To reduce damage caused by wireworms:** Incorporate into the soil at planting to a depth of 10-20 cm at a rate of 25-50 kg/ha (2.5-5.0 g/m<sup>2</sup>). Use the high rate when wireworm pressure is expected to be high

- The product works best when soil is moist but with little or no standing water.
- Bait may be placed directly on ant hills and trails.
- Do not place in piles.
